1. What This Guide Covers

This guide presents NexaTech from the visitor’s point of view. It explains which pages are included, what visual elements are shown, and what happens as the user navigates through the site. The WordPress configuration, PHP code, database, and internal functionality are explained separately in the technical documentation.

NexaTech is a corporate website that simulates a B2B technology consulting firm. The site includes a Home page, dedicated Services and Process sections, case study examples, and a Contact form.

2. Overall Site Flow

The menu includes Home, Services, Process, Case Studies, and Contact. Other links are also used throughout the page: Talk to an Expert takes the visitor to the Contact section, while View Full Case Study opens the corresponding article.

SECTION	WHAT THE VISITOR FINDS
HOME	General overview, metrics, services, process, and filterable case studies.
SERVICES	Detailed presentation of the four service areas and a final call to action leading to Contact.
PROCESS	Sequence: Analysis → Strategy → Development → Optimization.
CASE STUDIES	Metrics, company carousel, cards, and full case-study articles.
CONTACT	Form, visible validation, and final confirmation.

3. Home: Initial State

When the visitor enters the site, the hero section appears at the top of the page and serves as NexaTech's primary introduction. It contains the main message, a short introduction, and the Talk to an Expert button. The three metrics initially display zero while the entrance animation begins.

Initial hero state before the metrics finish counting up.

The hero serves as the initial presentation and does not use the same reveal-and-hide effect applied to the sections that follow.

4. Home: Metrics and Dynamic Message

After the entrance animation, the metrics count up to their final values. At the same time, part of the headline changes through a typing-and-replacement effect that cycles through concepts related to the solutions NexaTech offers.

Home hero with completed metrics and the dynamic message.

The Talk to an Expert button takes the visitor directly to the Contact page.

5. Home: Services and Process

As the visitor scrolls down, Home summarizes the main services and the work process. Services are presented as concise cards, while the process is organized into four numbered steps: Analysis, Strategy, Development, and Optimization.

Services and Process sections on Home.

Sections below the hero appear progressively as they enter the viewport and can replay their animation when the visitor scrolls away and brings them back into view.

6. Home: Case Studies and Filters

Further down, the Case Studies section appears. Category buttons above the grid let the visitor change which projects are visible without leaving Home.

Case Studies on Home before selecting a different filter.

The filters act on the same grid: they do not open a new screen or interrupt the Home experience.

7. Home: Changing the Filter

When another category is selected, the grid rearranges to show the case studies that match the chosen criterion. The navigation and the rest of the page remain unchanged.

Case-study grid after selecting a different filter.

The visitor can switch categories several times to compare different groups of projects within the same section.

8. Services: Web Development

The Services page expands on the four areas introduced on Home. The header metrics start at zero and then count up to their final values; below them, the page begins with Web Development.

Opening section of Services with metrics and Web Development.

Each service combines a title, a short description, and a list of key points. The large numbering helps visitors track their position in the sequence.

9. Services: Frontend Architecture and Automation

The next sections alternate their visual layout. Frontend Architecture appears on one side and Automation on the opposite side, reinforcing the page's vertical rhythm.

Frontend Architecture and Automation on the Services page.

As the visitor scrolls, the sections use lateral entrance animations and can appear again if the visitor scrolls away and brings them back into the viewport.

10. Services: Integrations & Optimization

The final section is Integrations & Optimization. Below it, the Have a Technical Challenge? call to action includes the Talk to an Expert button, which continues the journey to Contact.

Integrations & Optimization and the final call to action leading to Contact.

Flow: Web Development → Frontend Architecture → Automation → Integrations & Optimization → Talk to an Expert.

11. Process: Initial State

The Process page presents the methodology in four stages. In the header, the metrics begin at zero, while the first cards enter with lateral animations.

Initial state of the Process page.

The sequence progresses from top to bottom and retains the same top navigation for moving on to other pages.

12. Process: Metrics and First Stages

Once the entrance animation is complete, the metrics display their final values. They include simple counters and a dynamic range. Below them, Analysis and Strategy appear as the first stages.

Completed metrics and the first stages of the Process page.

The upper metrics summarize the scope of the process, while the cards explain the purpose of each stage.

13. Process: Development and Optimization

The final portion continues with Development and Optimization. The panels are arranged vertically and alternate their shape and entrance direction to reinforce progression from one stage to the next.

Final portion of the Process page, from Strategy through Optimization.

Full flow: Analysis → Strategy → Development → Optimization.

14. Case Studies: Initial State

When opening Case Studies, the visitor sees a dedicated header with metrics in their initial state. Below it, the area reserved for the company row is already visible.

Initial state of the Case Studies page.

The page brings together results, represented companies, and access to three more in-depth case studies.

15. Case Studies: Metrics and Carousel

After the animation, the metrics display their final values. Below them, a row of company logos scrolls horizontally in a continuous loop.

Completed metrics and the continuous company carousel.

The carousel requires no manual controls and visually separates the header from the case-study card area.

16. Featured Case Studies

The main section presents three cards: Vantix Retail, Stratum Solutions, and Axionis Pharma. Each one summarizes the project, highlights a result, and includes a View Full Case Study link.

Three featured case studies and the final Let's Talk call to action.

The Let's Talk button continues to Contact. View Full Case Study, by contrast, opens the dedicated page for the selected project.

17. Individual Case Study: Introduction

The full case-study pages follow a similar structure. Vantix Retail begins with the company identity, project title, an introduction, and the opening of The Challenge section.

Beginning of the Vantix Retail case study.

The other case studies follow the same overall presentation structure, while the company, problem, and results change.

18. Individual Case Study: Challenge and Solution

The case study continues with The Challenge, which presents the problem, followed by The Solution, which explains the actions taken to address it.

The Challenge section and the beginning of The Solution.

The content remains on one long page so the visitor can read the case study continuously without switching screens.

19. Individual Case Study: Solution and Results

The Solution section expands on the decisions and improvements that were implemented. The Results section then begins, presenting the outcomes achieved after the intervention.

Continuation of The Solution and the beginning of The Results.

The structure separates the problem, intervention, and results, making even a longer article easy to scan.

20. Individual Case Study: Closing and Results

The final section brings together the case-study results and closes the content. At the end, the navigation and footer remain available, allowing the visitor to return to Case Studies or continue to Contact.

Results and closing section of the Vantix Retail case study.

Reading structure: company and project → The Challenge → The Solution → The Results.

21. Contact: Empty Form

The Contact page presents the Let's Talk About Your Project message alongside a form. The visitor can enter a first name, last name, corporate email address, company, and a message describing the need to be addressed.

The screenshot shows a web browser window with the URL `demo-nexatech.mcartworkstudio.com/contacto/`. The page has a dark theme. At the top, the **NEXATECH** logo is on the left, and navigation links for **Inicio**, **Servicios**, **Proceso**, **Casos**, and **Contacto** are on the right. The main content area features a large dark rectangle with the heading **Hablemos de tu proyecto** and a subtext: *Somos una consultora tecnológica B2B enfocada en desarrollo web, automatización y arquitectura frontend robusta para empresas.* To the right of this text is a contact form with the following fields: **Nombre***, **Apellido***, **Email corporativo***, **Empresa***, and a larger text area for **¿Qué necesitas resolver?***. Below these fields is a blue button labeled **Enviar consulta**. The footer contains the text: **NexaTech © 2026**, *Consultora tecnológica enfocada en soluciones digitales escalables.*, and *Diseñado y desarrollado por Gaston Rizzo*.

Contact page before the form is completed.

The layout keeps the message on the left and the form on the right, concentrating the entire interaction on a single screen.

22. Contact: Completed Form

Once the information has been entered, the visitor can review it before clicking Send Inquiry. Required fields must be completed and the email format must be valid before continuing.

The screenshot shows a web browser window with the URL `demo-nexatech.mcartworkstudio.com/contacto/`. The website has a dark theme. The contact form is centered and contains the following elements:

- Title:** Hablemos de tu proyecto
- Description:** Somos una consultora tecnológica B2B enfocada en desarrollo web, automatización y arquitectura frontend robusta para empresas.
- Form Fields:**
 - Two input fields for names: "Gaston" and "Rizzo".
 - An email input field containing "gaston_rizzo@hotmail.com".
 - A phone input field containing "next".
 - A text area for the message containing "consulta para enviar:".
 - A blue button labeled "Enviar consulta".
- Footer:**
 - NexaTech © 2026
 - Consultora tecnológica enfocada en soluciones digitales escalables.
 - Diseñado y desarrollado por Gaston Rizzo

Completed form before clicking Send Inquiry.

In this version, submission is part of the demonstration flow: the interface validates the inquiry and displays the next state.

23. Contact: Visual Confirmation

When the submitted data is accepted, the form is replaced by a green visual confirmation. An option to return to the site and continue browsing also appears.

Visual confirmation displayed after the inquiry is validated.

The confirmation represents the visual end of the form flow; the documented version does not send an actual email.

24. Footer and Closing

The footer appears at the bottom of the main pages. It includes the company name, the year, and the developer's name, providing a visual ending to the content while maintaining the site's dark aesthetic.

Enlarged detail of the footer used throughout NexaTech.

Across the site, the top navigation, calls to action, and case studies form a coherent journey: the visitor can explore the services, understand the process, review examples, and finish at Contact without losing the overall visual identity.

End of the Walkthrough

Home presents the overall value proposition; Services and Process explain the work; the Case Studies section provides concrete examples; and Contact serves as the final point in the site's primary journey.
